July 18, 2023

Summary

- Current PIT-tag expansions at the Krassel PIT-array (KRS; as of July 17th)¹:
 - 655 natural-origin fish estimated from 118 observed tags and 18% sampling/tagging rate
- KRS was non-operational: 7/10, 7/11, 7/14, 7/15, and 7/16
 - Natural-origin PIT-tag passage during this period is estimated as ≤ 10 tags for an additional 56 natural-origin fish.
- The average passage date of $\geq 75\%$ of the total return across KRS is July 15th (Figure 1).
- End of season natural-origin estimate: 948
 - NOR: $(655 + 56)/.75 = 948$
- Current Lower Granite Estimate of McCall Integrated fish is 465.
- *Total ad-intact fish at KRS: 1,413*
 - $948 \text{ (NOR)} + 465 \text{ (Integrated)} = 1,413$

Assumptions

- 100% conversion of integrated fish to KRS.
- 100% detection efficiency at KRS
 - In 2021 and 2022 KRS detections efficiency was $\geq 95\%$.
- Static interpolation rate of 2 tags during the missed period at KRS when observations are typically decreasing.

Figure 1: Run-timing of SFSR hatchery (segregated and integrated) and natural origin returns across PIT-arrays. The grey lines indicate individual spawn year returns for 2010-2022, the dark blue line is the average cumulative proportion of returns across the same years, and the green line represents the current 2023 return.
